1.0 EVALUATION SCOPE

Compliance with the following codes:

- 2012 and 2009 International Building Code® (IBC)
- 2012 and 2009 International Residential Code® (IRC)
- Other Codes (see Section 8.0)

Properties evaluated:

- Preservative-treated wood
- Decay resistance above ground
- Termite resistance
4.0 DESIGN AND INSTALLATION

2.0 USES

Advance Guard® / Hi-bor® preservative-treated wood products are used in above ground applications that are required by code to be protected against decay and termites.

3.0 DESCRIPTION

3.1 General:

Advance Guard® / Hi-bor® preservative-treated wood products are recognized for use in above-ground applications and to resist attack by fungal decay and subterranean termites, including Formosan termites.

Advance Guard® / Hi-bor® preservative-treated wood uses WoodBor brand and/or TIMBOR Industrial brand wood preservatives that are supplied by Osmose, Inc., and are used by the wood-preserving treatment facilities listed in Table 3, to preservative-treat wood members in accordance with the Osmose, Inc. Quality Control Manual.

3.2 Preservative System:

Wood Bor brand and/or TIMBOR Industrial brand wood preservative is a Disodium Octaborate Tetrahydrate (DOT) wood-preservative-treatment chemical for treating wood members.

3.3 Materials:

The following wood products may be treated with the Wood Bor brand and/or TIMBOR Industrial brand wood preservative:

b. Plywood must have veneers consisting of the following species: Southern pine and Douglas-fir.

Minimum preservative retention levels must comply with the values shown in Table 1.

4.0 DESIGN AND INSTALLATION

4.1 General:

Advance Guard® / Hi-bor® preservative-treated wood is installed as preservative-treated lumber, timbers and plywood in accordance with the requirements of the applicable code.

Osmose, Inc., and industry-published installation instructions for wood and pressure-treated wood and this report must be strictly adhered to, and a copy of the instructions must be available at all times on the jobsite during installation.

The instructions within this report govern if there are any conflicts between the Osmose, Inc., instructions and this report.

4.2 Applications:

Advance Guard® / Hi-bor® preservative-treated wood products may be used in locations where wood is permitted and/or in locations where wood is required by the code to be fungal decay or termite resistant in all building types and occupancies as defined by the applicable code. The treated wood members are recognized in this report for use in above-ground applications where they are continuously protected from liquid water. Advance Guard® / Hi-bor® preservative-treated wood may be used as sill-plates over concrete slabs and foundations in accordance with the applicable code. Typical applications are described in Table 2.

Locations requiring preservative-treated wood for decay or termite resistance are described in Section 2304.11 of the IBC, and Sections R317 and R318 of the IRC.

4.3 Fasteners:

Fasteners used with Advance Guard® / Hi-bor® preservative-treated wood products must be in accordance with Section 2304.9.5 of the IBC and Section R317.3 of the IRC, except that aluminum fasteners and carbon steel fasteners are also permitted when used for interior applications.

4.4 Protection from Water:

The borate preservative in Advance Guard® / Hi-bor® preservative-treated wood is water soluble and the treated wood must be protected from liquid water, where permanently installed.

Advance Guard® / Hi-bor® preservative-treated wood used in weather-protected exterior applications must be continuously protected from direct wetting with a minimum of one coat of primer and two coats of finish paint.

4.5 Structural:

4.5.1 Duration of Load: The maximum load duration factor allowed for Advance Guard / Hi-bor® treated wood products used for structural members is 1.6, in accordance with Section 2.3 of the American Forest & Paper Association (AF&PA) National Design Specification for Wood Construction (NDS).

4.5.2 Incising Factor: When the treated wood products have been incised, the reference design values must be multiplied by the incising factor, Cc, in accordance with Section 4.3.8 of the NDS.

5.0 CONDITIONS OF USE

The Advance Guard® / Hi-bor® Preservative-treated wood described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Use of the preservative-treated wood is limited to the types of applications noted in Section 4.2.

5.2 Surface treatment of field cuts must be in accordance with the recommendations of Osmose, Inc.

5.3 The Advance Guard® / Hi-bor® preservative-treated wood products are limited to the wood species noted in Section 3.3 and minimum retention levels noted in Table 1.

5.4 Treated lumber and plywood used for protection against Formosan termites must be labeled/identified for this use as described in Section 7.0.

5.5 Treatment of wood products is at the facilities of the treaters noted in Table 3, under a quality control program with inspections by Timber Products Inspection Inc. (AA-664 and AA-696) or Southern Pine Inspection Bureau (AA-680).

6.0 EVIDENCE SUBMITTED

6.1 Data in accordance with Appendix J [Disodium Octaborate Tetrahydrate (DOT) Wood Preservative Systems (Formerly AC62)] of the ICC-ES Acceptance Criteria for Proprietary Wood Preservative Systems—
Common Requirements for Treatment Process, Test Methods and Performance (AC326), dated February 2013.

6.2 Quality control documentation in accordance with Section 5.0 of AC326, and in compliance with AWPA M22 and AWPA M23.

7.0 IDENTIFICATION
Advance Guard® / Hi-bor® preservative-treated lumber, timber and plywood must be stamped or end-tagged with the name of the inspection agency (Timber Products Inspection Inc.); the product name (Advance Guard® / Hi-bor®), the Osmose, Inc. name; the treatment company name and plant location (refer to Table 3); the name of the preservative components; the intended end use application (see Table 2); minimum retention; and the evaluation report number (ESR-2667). Sample labels are shown in Figures 1 and 2.

Products treated for protection against Formosan termites must be labeled as shown in Figure 1.

8.0 OTHER CODES
In addition to the codes referenced in Section 1.0, the products described in this report were evaluated for compliance with the requirements of the following legacy codes and earlier editions of the International codes:
- 2006, 2003 and 2000 International Residential Code® (IRC)
- 1997 Uniform Building Code™ (UBC)
- BOCA® National Building Code/1999 (BNBC)
- 1999 Standard Building Code© (SBC)

The Advance Guard® / Hi-bor® preservative-treated wood products described in this report comply with, or are suitable alternatives to what is specified in, the codes listed above, subject to the provisions of Sections 8.1 through 8.6.

8.1 Uses:
See Section 2.0.

8.2 Description:
See Section 3.0.

8.3 Installation:
See Section 4.0, except for the following modifications:

Locations requiring preservative-treated wood for decay or termite resistance are described in Section 2304.11 of the 2006, 2003 and 2000 IBC, Sections R319 and R320 of the 2006 and 2003 IRC, Sections R323 and R324 of the 2000 IRC, Section 2304 of the SBC, Section 2311 of the BNBC, and Section 2306 of the UBC.

Fasteners used with Advance Guard® / Hi-bor® preservative-treated wood products must be in accordance with Section 2304.9.5 of the 2006, 2003 and 2000 IBC, Section R319.3 of the 2006 and 2003 and IRC, Section R323.3 of the 2000 IRC, Section 2306.3 of the SBC, Section 2311.3.3 of the BNBC, and Section 2304.3 of the UBC, except that aluminum fasteners and carbon steel fasteners are also permitted when used for interior applications.

8.4 Conditions of Use:
See Section 5.0.

8.5 Evidence Submitted:
See Section 6.0.

8.6 Identification:
See Section 7.0.
